

Personal reflections

Christian:

XR was the only reason I chose Horsens to get my degree, I absolutely love it and that's why I wish the entire process would have concluded better.

Admittedly, we didn't have the best of starts. Compared to the end result of our VR project, I find the AR project slightly lacking - a sum of that can be attributed to the lack of LIDAR in our Android phones, but we most likely could have made something better.

Pair programming was both a blessing and a curse, as it allowed us to work together at any time, since Nicklas and I are roommates and I have my own pair of VR goggles; however due to a really bad setback with the company I was working with for my Bachelor's assignment, it also meant that I didn't have much time at all, which meant that Nicklas, who isn't in his final semester, had to work a bit extra on the AR assignment.

When it came time to the VR assignment however, I already had experience with Unity, despite not having taken the Game Development class the previous semester, so I was able to formulate the idea and how different game assets work together, while Nicklas focused on just coding alongside me. It's for this reason that I feel the VR assignment outclasses the AR assignment vastly, despite both fulfilling the assignment requirements in our opinion.

If I had to start over, I would;

- A. Pick a different company to do my Bachelor's with.
- B. Been more invested in the AR part.

Despite this, I did learn a lot, and I'm very excited to pursue VR in the future where applicable.
